

Bryson Richards

Software Engineer | Cloud & Automation

Eden, NC · (208) 406-7762 · bryrich.dev@gmail.com · [LinkedIn](#) · github.com/bryrichdev

PROFILE

Software engineer with five years in financial services, building and owning the production automation that runs daily treasury operations. Builds Java and Spring Boot applications backed by PostgreSQL, with AWS infrastructure in Terraform and automated Docker deployments through GitHub Actions. B.S. Software Engineering complete; AWS certified.

TECHNICAL SKILLS

Languages	Java, JavaScript, TypeScript, Python, SQL, VBA
Cloud & Infrastructure	AWS (EC2, S3, ECR, IAM, SSM, Lambda, VPC), Terraform, Docker, Cloudflare
Backend & Web	Spring Boot, JPA/Hibernate, REST APIs, Angular, React, Node.js, Google Apps Script
Data	PostgreSQL, MySQL, BigQuery, data modeling, stored procedures, triggers, Flyway migrations
Testing & Automation	JUnit, Testcontainers, pytest, Playwright, PDFBox, browser and document automation
Tools & Practices	Git/GitHub, GitHub Actions, CI/CD, Linux/macOS, infrastructure as code, Agile delivery

CERTIFICATIONS & EDUCATION

- AWS Certified Cloud Practitioner (CLF-C02) - Amazon Web Services
- CompTIA Project+ (PK0-005) - CompTIA
- AWS Certified Solutions Architect - Associate (SAA-C03) - in progress
- B.S. Software Engineering - Western Governors University, September 2026

PROFESSIONAL EXPERIENCE

Project Manager - Treasury Automation, Conserve

June 2024 - Present · Remote

- Sole developer and maintainer of treasury automation in Google Apps Script, JavaScript, and VBA; own production triage and requirements gathering with finance stakeholders.
- Engineered a credit card reconciliation pipeline handling tens of thousands of daily transactions, eliminating 50+ hours of manual work per week from reconciliation through archiving.
- Built an Apps Script REST API connecting Excel clients to Google Workspace data and giving leadership live visibility into treasury metrics.
- Developed SOE performance tracking and reporting for senior leaders, replacing 20+ hours of manual leadership reporting each month.

Payment Resolutions Team Lead, Conserve

December 2022 - June 2024 · Logan, UT

- Led the team in preventing client utility disconnections by resolving complex payment and billing errors under tight service deadlines.
- Reduced the team's open ticket queue from roughly 4,000 to 200 by redesigning intake processes and introducing supporting tooling.
- Set and enforced Standards of Excellence, trained team members, and ran quality reviews to hold accuracy and throughput targets.

Payment Operations Assistant Team Lead, Conserve

October 2021 - December 2022 · Logan, UT

- Supported daily payment operations, trained team members on systems and processes, and tracked performance against Statement of Expectations metrics.

PROJECTS

PantryPrep - Meal Planning & Grocery Automation · Java, Spring Boot, PostgreSQL, Docker, Terraform, AWS

Built and deployed a meal planner that scales recipe quantities, converts compatible units, and subtracts pantry stock across a weekly plan. Cooking and grocery stock-up keep inventory in sync. Provisioned EC2 with Terraform; GitHub Actions deploys scanned ECR images through SSM with health checks and rollback.

[pantryprep.app](#) · [Source](#)

CredCloud - Credentialing Workspace & Automation · Java, Spring Boot, PostgreSQL, Playwright, PDFBox, AWS

Built a multi-tenant workspace for provider records, documents, and payer enrollments. Generates reviewed PDF applications from versioned templates and fills portal forms in a temporary browser or Chrome extension, leaving submission to the user. Added workspace-scoped S3 storage, admin MFA, and encrypted backups with restore drills.

[credcloud.app](#) · [Source](#)

Personal Portfolio · React, TypeScript, Vite, Cloudflare, GitHub Actions

Built a responsive portfolio with typed content, project filters, accessible navigation, and light/dark themes. CI runs lint and production-build checks; Wrangler configures static assets for Cloudflare.
